

Secure Rx Pads

Prescription Pad Imprint Program

Security and Plain Styles Available

Effective October 1st

A tamper resistant Prescription Pad must contain at least one of the following requirements:

- 1.) one or more industry-recognized features designed to prevent unauthorized copying of a completed or blank prescription form;
- 2.) one or more industry-recognized features designed to prevent the erasure or modification of information written on the prescription by the prescriber;
- 3.) one or more industry-recognized features designed to prevent the use of counterfeit prescription forms.

We Meet and Exceed these requirements . . .

Order # 810525-4
VERIFICATION BOX: HOLD BETWEEN THUMB AND FOREFINGER OR BREATHE ON IT. COLOR WILL DISAPPEAR, THEN REAPPEAR.

*Our high security prescription pads offer the latest fraud prevention technologies. They meet & exceed the requirements of CMS and any state Board of Pharmacy!**

FEATURES

- A** • MicroPrint Security Borders: minute printing of a security message along the edges of a pad that fill in to form a solid line when digitally scanned or xerographically copied; also used in printing US currency.
- Reverse printed RX (lighter colored) in opposite corners of pad drop out when photocopied to appear white.
- B** • Copy resistant security pantograph discourages duplication by high end photocopier.
- Tamper resistant background ink shows attempts to alter script by patient.
- Hidden security "VOID" appears when photocopied.
- C** • Thermochromatic ink box changes to white when rubbed or heated.
- D** • Each order has an individual numeric lot identifier so lost or stolen prescription pads can be invalidated.
- E** • Each sheet is sequentially numbered for internal and state-mandated record keeping.
- Penetrating magnetic ink is used to print your information on the script preventing chemical "lifting" of information during forgery.
- F** • Security features warning bands on front and back of script detail hidden and overt security features.
- All secure scripts have a high security watermark on reverse side which cannot be copied and can only be seen when held at a 45 degree angle to a light source.
- Coin-reactive ink now used on backer - validate authenticity by just rubbing back with any U.S. coin!
